

# NeuroCheck 6.2 - Now available in several languages

Multilingualism is of extreme importance when using a software product globally. Therefore, the new version 6.2 of the NeuroCheck visual inspection software is now available in several languages.

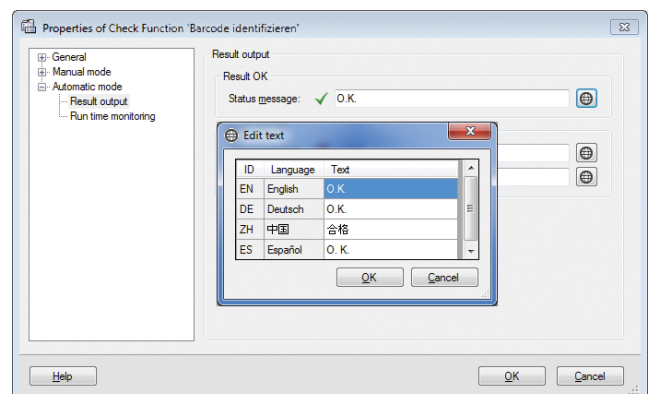

Besides German and English these are French, Italian, Polish, Portuguese, Romanian, Spanish and Czech. There is also a Chinese NeuroCheck edition.

## Enabling multilingualism

Activating multilingualism in the software settings enables the user to switch easily between language versions and view information in the appropriate language. Click the »globe« icon to enter text in several languages.

## New language diversity for global use

### Switching languages

To conform with the Machinery Directive of the European Union, languages can be switched during runtime using the NeuroCheck Control Panel.

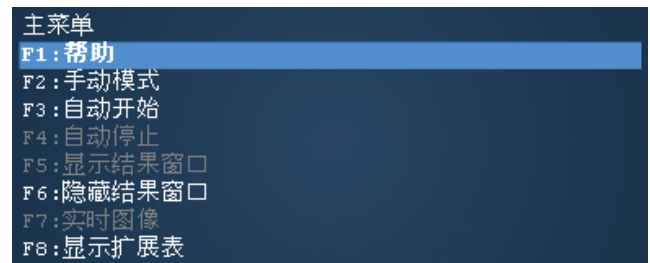

Switching languages during automatic operation

### Chinese character set

The integration of the Chinese character set into the software posed a special challenge. The large number of Chinese characters and their complex shapes mirror the fact the Chinese language has many dialects which causes differences in the spoken and written language from region to region.

The Chinese character set can displayed in dialogs without any difficulty. Text can be transferred from Word or Excel using Copy&Paste.
